## COMPLETED REQUIREMENTS & EXTRA WORK:

- Minimum requirements
  - My index.html show up as a complete webpage.
  - Webpage includes both header & footer.
  - Webpage includes links to resume PDF file & LinkedIn.
  - Sub-webpage includes 3 photos.
  - All the styles were formatted in CSS.
  - Custom font was being used. (source: Google Fonts)
- Extra work added
  - Contact webpage via Email
  - Make the each listing option looks like a button
  - Colorful background
  - Fixed webpage's size

## RETROSPECTIVE

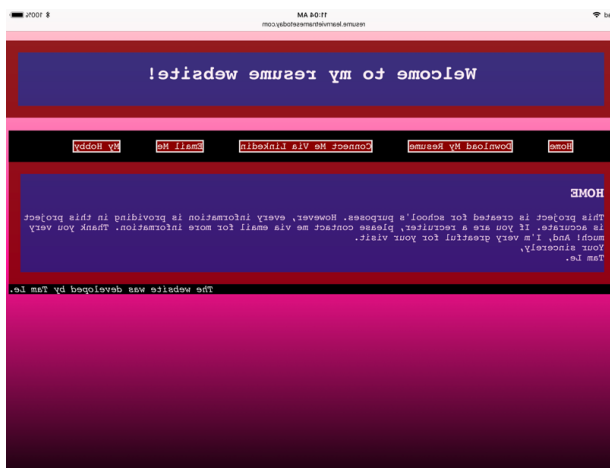

- Things happened as planned:
  - Every minimum requirements can be done without any problem.

- 
- All the sources (instructor's coding example & W3school.com) can answer all my questions and became very helpful when correcting mistakes in my code.
  - Things went wrong:
    - Added photos looked good on HTML file and trial look. However, whenever I put the html on my hosting for the website went live, all the pictures didn't appear correctly.
    - I thought colorful background, transparent contents can be done easily. But, end up spending round 3 hours to search and try many ways to apply those code under my needs.
    - I planned to just upload the resume on my Linkedin. But, it took me a day to refresh my Linkedin because everything was outdated. I also spent time to make it look cleaner and clearer to look at.
    - Trello was easier than my thought. I planned to spent an hour to know how to use it. But, I only spent 5 minutes to figure out.
    - Google Drive was not as helpful as I expected it to.
    - Picking CSS colors was very tiring and challenging. Some colors looked really nice individually, but looked horrible when combined.
    - My original plan was to make responsive website, but it was really challenging and hard to do. So, I ended up making a fixed website.
  - What I would change if I could redo the sprint:
    - My biggest mistake I made during this sprint was that I did not draw a website design on paper. So, I did things based on the minimum requirements and felt lost. It was like doing things without really seeing it. If I could turn the time back, I would draw a simple website theme on paper beforehand.
    - I set too high expectations. I thought to add too many things on my website theme. But, I realized that the minimal theme was my best choice. Because it is easier to read the contents, it showed up more modern and neater. I write down this and remember for the next sprint.
    - I spent too much time for side tasks instead of minimum requirements. So, I almost missed out some of the requirements. Luckily, I started to do the sprint early, so I had a lot of time to check mistakes and missing

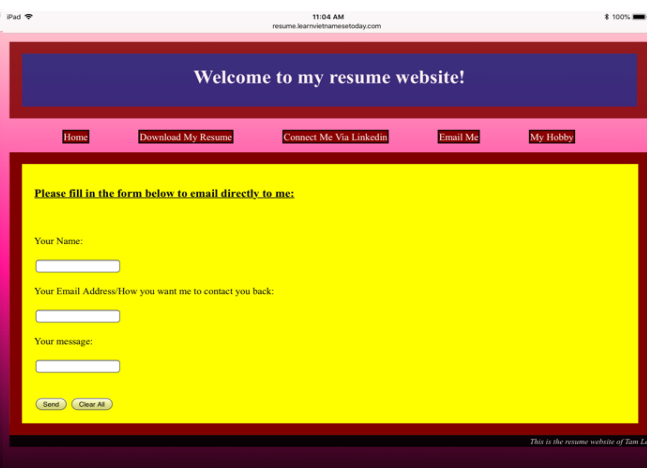

requirement. If I redid this sprint, I would spend time on doing minimum requirements before anything else.
