

SPRINT CAPACITY

- My weekday-self will be responsible for matching sprint 2 minimum requirements to my current HTML file.
- 2. My weekend-self will be in charge of correcting errors and learning advance CSS in order to turn HTML closer to my website's idea.

PERSONAL COMMITMENT

Because my time is quite tight during the weekday, I targeted to complete simple tasks first during this time. However, in the weekend, I might have much more time. So, I expected to learn some new things in CSS to make the HTML file more colorful and attractive. My commitment was completed the sprint 2 minimum requirements before submit my sprint 2 plan, and complete my expectations before sprint 2 deliverable.

- MY ISSUES

 & NCERNS

 CON
 - I'm having several issues when applying any formatting in .css file. Everything did not go to my planned direction.
 - My biggest issue may come from language barrier. Sometimes, I misunderstood the point and need to spend a lot of time to fix the error.
 - The final issue may come from my lack of visual basic class. Therefore, at some point, it may be too easy for anyone to follow every step. However, to me, it takes hours.

- My concern is that I will not have enough time to finish everything I've planned for this sprint.
- ♣ The second concern is that I always try too hard on researching and completing my HTML as close as possible to my ideal plan. However, within my limitation in computer science's knowledges, I usually end up with disappointment and bad result, which cause me stress and sleepless at night.
- My last concern is that I might make some mistakes or miss important points of the project while focusing too much on achieving the website's ideal look.
